SUMMARY OF INFORMATION

Site consists of a structure in an open, flat area. The structure consists primarily of highly processed metals. The structure was engineered as opposed to built. Something mechanical is related to its purpose. One portion of the structure is spherical, another has a major vertical angle of less than 90 degrees. The inside of the structure has a low ceiling and a busy design. There are numerous exposed cables and pipes; lots of 'straight-forward' electronics/electrical components. There are also hydraulic components inside. Inside is also a flat, smooth white surface that is tilted at a 50-60 degree angle (sketch page 6.) The outside of the structure is metallic, glossy and smooth. The roof has different levels and has all kinds of stuff sticking out on top, reminiscent of antennas, radomes, wires, etc...
